News Release   **April 12, 2013**

WECO Introduces WATT-Net Plus Advanced Device Management Software and New Alliance with Software Integration Partner AMSLLC

WECO's latest meter life cycle management software WATT-Net Plus combined with AMSLLC's custom software integration services and application tools provide a comprehensive inventory management solution to fully integrate your utility operations.

Meter-Shop management systems can provide years of value in cost saving and productivity. **WECO** (Watthour Engineering Company) **WATT-Net Plus** is the most comprehensive Meter Shop Management Software platform to be made available to the utility industry. WATT-Net Plus is simply the best choice to provide maximum configurability, assign business rules and accommodate an inclusive variety of tools, meters and measurement devices. In the changing environment of new smart grid accessories and systems, you can be assured that the software has the integration capability to support today's metering inventory management requirements.

In addition to supporting an extensive variety of metering devices WATT-Net Plus will integrate into a broad range of electric utility Customer Information Systems (CIS) using AMSLLC's integration solutions. A few of the supported operations include automated testing covering all aspects of KW and KWH for WECO and Radian test equipment as well as support for CT and PT, transfer standard and transducer testing.

The **Management Dashboard** allows custom graphical views and key performance indicators to assist management in their day to day decisions. **Administration Functions** provide assigned users with the ability to create, edit and export meter data through-out your organization in the format you require. The role based Security can be set to allow access to only the desired multiple-use levels. **Reports** can be generated to support your operation and sample testing while insuring that the meter production system performance is not affected. WATT-Net Plus will accommodate all aspects of **AMI** programmable device tracking, and the software has the ability to be customized to provide device software, firmware, program ID and certification data from multiple devices as needed. A **Sticky Note** feature posted to specific assets will remind operators of some pending action or issue. **Inventory Management** allows your organization the capability to track assets from cradle to grave through-out your organization.

AMSLLC (Advanced Metering Services LLC) is the preferred integration service for WATT-Net Plus software that can exclusively provide a comprehensive meter shop solution to fully integrate meter data across your entire utility.

If your organization needs system integration AMSLLC has years of metering experience and a solid understanding of metering processes to assist you. AMSLLC can help you build a system configuration plan that will save ongoing labor costs while maximizing the performance of your new WATT-Net Plus system. With AMSLLC's integration expertise, you can be assured that your WECO and Radian equipment along with WATT-Net Plus are configured for optimum efficiency and performance value.

Service provided by AMSLLC will provide tools designed for migration and cleaning up old meter records. The Meter Data **Scrubber** tool helps you locate bad data and then lets you decide how to fix them. **MeterShop Connect** tools provides custom connectivity options for meter test equipment and field devices. The **MeterShop Listener** supports key infrastructure systems such as CIS, work and inventory management, MDM and AMI Head-End system integration.

After your WATT-Net Plus integration is complete, AMSLLC offers comprehensive on-line system administration and application support services for your WATT-Net Plus system and is directly involved with the WECO development team. It should be noted that if AMSLLC integration services are not required WECO offers its customary world-class WATT-Net Plus support.

WATT-Net Plus is by far the definitive choice in meter test and management software. When combined with AMSLLC's integration expertise it is the clear choice for any utility that desires ultimate efficiency and cost effectiveness within their meter operations.
