

Meter Shop Process Improvement Workshop

**Methods
Driven
Process**

Attention! Electric Utility Meter Shop Managers

Do you identify with some or all of the following?

Is there a looming AMI deployment, and not sure if existing meter shop testing capacity is adequate? Do you question if the automation you currently have is effective? Are there difficulties finding assets or equipment when using your existing software database structure. Is there not enough equipment or people to keep up with meter testing demands. Is there push back on equipment or headcount requisitions because your manager questions the efficiency in your current process? Are you trying to calculate whether outsource contracting is right for your organization? Too much meter inventory taking up valuable space or nearing warranty expiration.

STOP: Before you decide your course of action ask RADIAN to help facilitate a Meter Shop Process Improvement Workshop.

The RADIAN Workshop is a three day On-site Process Improvement exercise facilitated by skilled Process Improvement RADIAN professionals. The Workshop will guide you to the desired outcome of increased throughput without adding headcount, without adding additional equipment and without the need to utilize contract testing services.

RADIAN will be on-site for three days with members of your team to walk and map the 'current state' process discussing and observing what you actually do (versus what you think you do). We will identify along the way 'non value added' and 'Waste' within your existing processes.

Can you identify with 'Waste' in your Meter Shop? Unused Creativity, Quality Defects, Overproduction, Transportation, Waiting, Inventory, Motion and Reoccurring Process are all symptoms of a less efficient operation.

Having mapped your 'current state' its time to plan and implement a new, more efficient 'future state' process flow. Use the tools provided by a RADIAN Process Improvement Workshop to determine for yourselves how to reduce or eliminate waste.

Improvement Workshops require the undivided attention of 5 to 8 meter shop participants including managers, supervisors, process and non process owners. The RADIAN Workshop engages and empowers participants to see for themselves and share in a 'future state' improvement strategy. This allows the participants to have ownership in the new process instead of having it forced upon them without input.

The workshop is for Electric Utility Meter Shops facilitated by RADIAN Process Improvement experts that understand metering. Ask your local RADIAN sales agent to set up a conference call to learn more about scheduling a RADIAN workshop at your facility.

What Customers are saying about The RADIAN Electric Utility Meter Shop Workshop...

"I was amazed, we found a 200% increase in throughput using existing resources"

"Our process walk through made me realize how much tribal knowledge had found its way into our operations"

"My team have a renewed focus on continuing to improve process because they were engaged in this workshop"
