

Inventory Management Module

Take control of your inventory and weather any storm with ease!

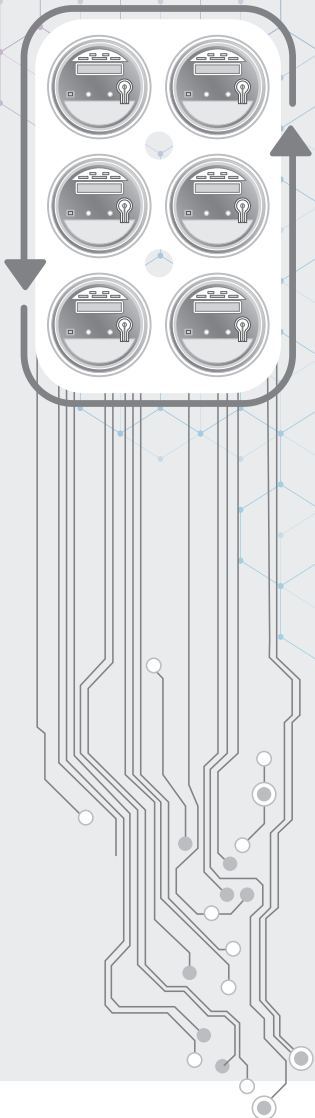

Overview

To get through the supply chain crisis and economic downturn, data-driven planning is imperative. The Inventory Management Module not only helps you keep track of what inventory you have, but also offers real-time insights and recommendations based on availability, supply patterns, and seasonality. With a user-friendly interface and configurable business rules, you can easily manage inventory levels, locations, and status, while also generating reports for simplified accounting and tracking for year-end audits. You can have peace of mind knowing that your inventory is being effectively managed to help your business thrive.

Pricing: Asset based license fee

Who Benefits?

- Meter shop personnel
- Warehouse personnel
- Third party material handlers

Pains and Gains

- Pains Addressed

- **Significant time savings** with automation of inventory tracking and management
- **Reduced costs:** By optimizing inventory levels and minimizing overstocking and stockouts, costs associated with carrying inventory can be trimmed down
- **Simplified audits and compliance:** Simplify the process of tracking inventory for audits and compliance purposes, reducing the risk of errors and potential penalties

+ Gains Unlocked

- **Improved inventory accuracy:** Maintain accurate stock levels by providing real-time updates and reducing human error.
- **Better decision-making:** With access to real-time inventory data and insights, businesses can make informed decisions about purchasing, stocking and distribution
- **Enhanced efficiency:** Automation of inventory management processes improves workflow and reduces the time required for tasks such as tracking, counting and ordering
